

How to make your own graph

Your first job as an interviewer for the Mt. Vernon Student paper will be to provide the class with information on the student's favorite pizza, type of cell phone, favorite sport, and the number of students that are in your sixth hour class (you will collect this information for the next four days). You will interview 100 students. We will start by interviewing some your classmates

100- # of classmates = _____ people to interview still.

You must provide the correct labels for each graph including titles of each graph, X and Y axis labels, or percentages for pie graphs.

For your charts:

1. Create a pie graph for type of color.
2. Create a bar graph for type of cell phone.
3. Create a pie or bar graph for favorite sport.
4. Create a line graph for the number of students in your sixth our class
